

Rise Above Vertical Pack Support for Non-Rigid Containers

Corrugated Pack Support for Palletizing

Some containers, such as gable top cartons, aseptic prisms and chipboard cartons, require additional support for palletizing and distribution. Corrugated risers provide the stacking strength required for palletizing. This eliminates the need for costly RSCs and traditional methods such as plastic milk crates. For gable top cartons, the risers combined with shrink wrap eliminates the costs associated with transporting, sanitizing and theft of plastic milk crates.

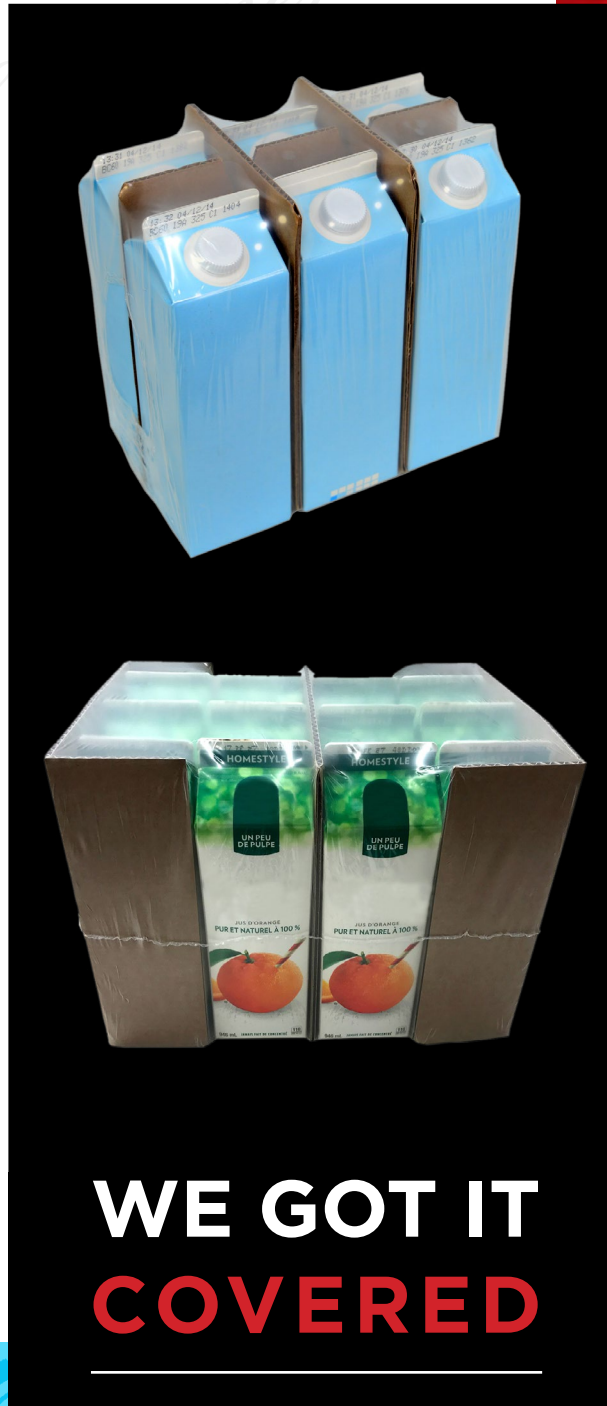

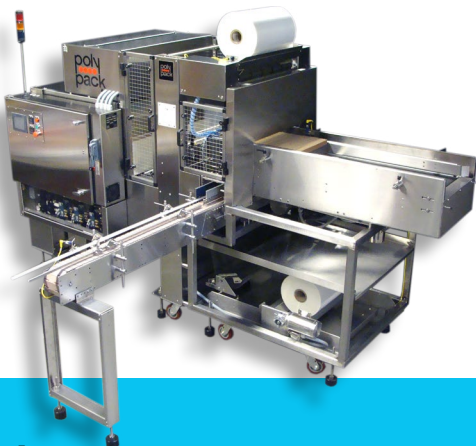

Polypack offers two options for supports:

1) Straight pieces of corrugated board are inserted in between rows of cartons during the collation process just before shrink wrapping.

Video: <https://vimeo.com/115348243>

2) U-boards are placed on the ends of the products just prior to shrink wrapping to provide both product protection for the containers as well as vertical stacking support for palletizing. (Patent # US8256192)

We value your opinion! Please let us know what you think about this new packaging innovation, and whether or not you think it would work for your product line. Please contact us at info@polypack.com and let us know your thoughts.
